

What's New in Version 6

In a continued drive to utilize the power of data visualisation techniques to improve the effectiveness of people in business, Version 6 focuses on enhancements to the project management, brainstorming, communication and personal productivity capabilities of the application. Highlights include:

- An automatically created **Word Cloud** enables users to quickly gauge the emerging themes during brainstorming, requirements gathering and other group sessions.
- Seamless integration with a range of **cloud storage** providers will allow users to save and open files in **Dropbox**, **OneDrive** and **Google Drive** directly from MindGenius
- The unique Map Explorer gets a new **'Pan' mode** enabling users to scroll quickly to any area of a large map
- **In-place editing**, replaces the 'Add Branch' dialog, providing a cleaner map view for presentations and brainstorming
- Total Cost and Quantity **calculations** can be added to selected branches within the map
- Project managers will benefit from additional project **percentage resourcing** capabilities and the ability to **customise** the Gantt chart
- And more of the most commonly requested **user enhancements**

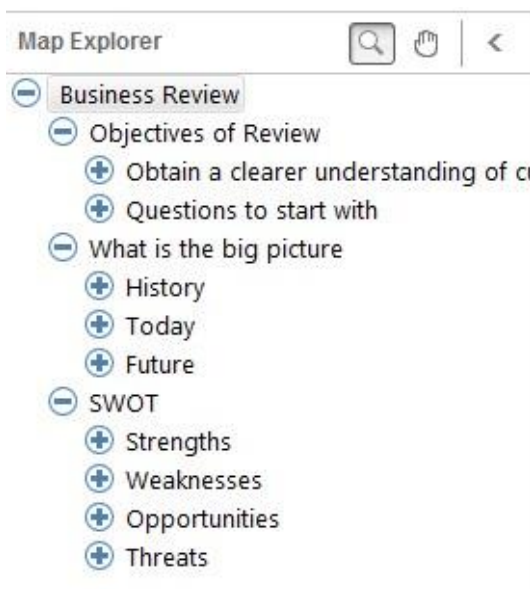

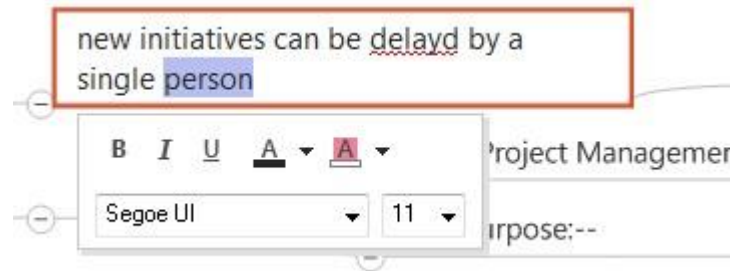

In addition to a strong set of new features, Version 6 has a completely new look and feel. Based on the latest Microsoft Office 2013 ribbon styling the new interface is less intrusive and makes the map and its' content stand out during presentations.

In-place editing

New branch styles and in-place editing, that replaces the 'Add Branch' dialog, make the data capture and map building process much simpler and clearer while projecting and capturing information live.

This most requested feature also includes in-place spell checking.

Map explorer modes

Mapping information allows us to gather and make sense of large amounts and sometimes complex data.

MindGenius is the only product to provide a 'Map Explorer' that enables the user to move quickly between high level and detailed views of your information.

Version 6 introduces a new 'pan' mode to the map explorer that was first introduced in the MindGenius iPad app and found to be of great value on that device.

Cloud storage Integration

Integration with a range of cloud storage providers will allow users to save and open files in Dropbox, OneDrive and Google Drive directly from MindGenius.

MindGenius Web

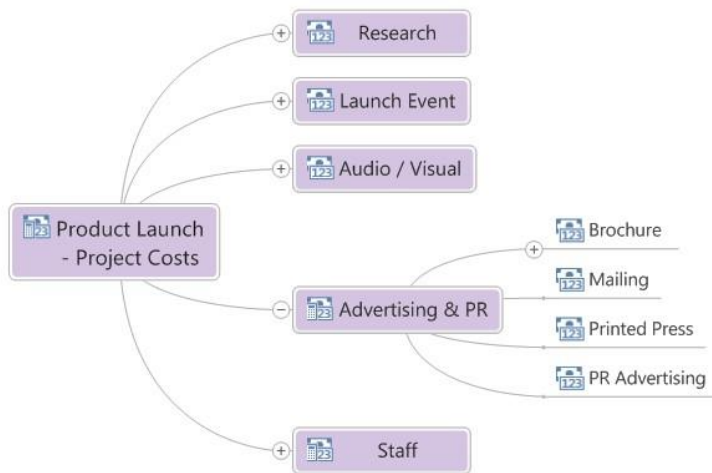

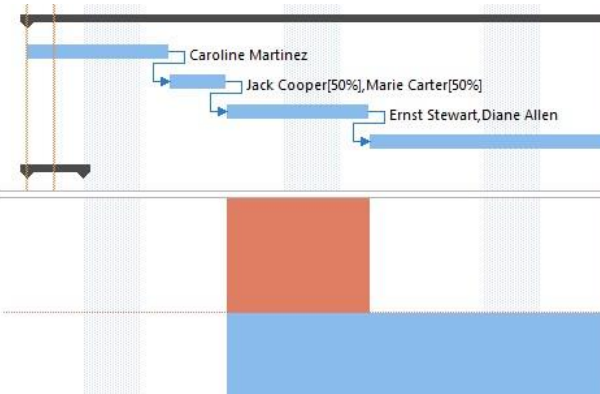

A cloud version of MindGenius is currently being developed. It will be compatible with and complimentary to Version 6 desktop and will provide remote multi-user collaboration features.

Project Management

Those who manage tasks and projects will benefit from new cost and quantity calculations, the ability to customise the Gantt chart and additional project resourcing capabilities.
